Brandon Carp

Senior Staff Security Architect

New York metro | linkedin.com/in/brandoncarp | github.com/carpf1sh

Summary

Security architect whose career spans detection and response, cloud and identity security, AI security, and cyber risk governance. On Diligent's Security Architecture and Engineering team I lead architecture reviews, including enterprise AI platforms; before that I ran cloud security, threat detection, incident response, and offensive testing. Earlier, I built security metrics, risk, and analytics programs at Indeed and OCC.

Experience

Senior Staff Security Architect

Diligent Corporation | Apr 2026 – Present

- Designed and launched a security architecture review process tied into vendor risk, change, and portfolio management, bringing security into major projects early.
- Lead security reviews of enterprise AI platforms and AI-driven business workflows, assessing system boundaries, data flows, and baseline control adherence.
- Led the design of AI agents that triage critical cloud security findings, route remediation to owning teams, and assess exposure to new threat advisories.
- Built an AI skill that accelerates security architecture reviews and raises evidence standards for code-based solutions, with a human reviewer supplying business context.
- Built an AI-assisted workflow that turns EDR coverage reporting into prefiltered, owner-specific remediation guidance.

Manager, Security Operations

Diligent Corporation | Apr 2024 – Mar 2026

- Rolled out Wiz CNAPP across 600+ AWS accounts plus Azure and GCP, giving security and engineering teams prioritized visibility into cloud risk.
- Championed AI coding tools across the SOC and led a Model Context Protocol (MCP) integration layer connecting them to core security tools, with security guardrails.
- Modernized the security incident response plan and commanded high-profile incidents across on-premises, multi-cloud, and SaaS environments.
- Architected global security log pipelines across AWS, Azure, GCP, and on-premises, with Python and AWS-native automation to enrich alerts and drive response.
- Managed threat detection across an MDR provider and in-house analysts, mapping detection rules to MITRE ATT&CK.
- Designed Wiz project segmentation and role-based access for 1,000+ engineers across 100+ teams, with roles assigned automatically through Okta.
- Led security design for a company-wide move to Atlassian, treating it as a first-class system with segregated sensitive data, SOC monitoring, and two-thirds fewer admins.
- Mentored security operations analysts on internal investigations and threat hunting, building scalable approaches to analyzing security events.
- Redesigned custody of HSM administrator cards across three sites with redundant access, separation of duties, and auditable chain of custody, later adopted by Infrastructure.
- Advised on security for major changes to core identity and SaaS platforms (Okta, Active Directory, Microsoft 365, Salesforce) and integrated security tooling via SSO and SCIM.
- Ran the annual penetration test and red team programs, setting scope, vendors, and rules of engagement, and drove remediation across corporate and cloud networks.
- Proactively assessed exposure to Scattered Spider-style social engineering and strengthened identity verification across customer support, help desk, and finance processes.

Senior Security Operations Analyst

Diligent Corporation | May 2023 – Apr 2024

- Led the migration from on-premises Splunk to the Panther cloud SIEM, re-engineering log collection and reimplementing detection use cases.
- Designed and ran three annual incident response exercises with senior leaders from eight departments, using dynamic cross-business scenarios that surfaced risks needing treatment.
- Drove remediation of external security ratings findings (BitSight, SecurityScorecard), tracing each externally observed issue to its accountable owner across small, shifting engineering teams and partnering with them to prioritize and implement the right fix.
- Consolidated security request intake into a single automated, ticket-based workflow, simplifying prioritization and reporting and speeding responses 30%.

Senior Security Technical Program Manager, Analytics

Indeed | Mar 2022 – Mar 2023

- Built Indeed's Security Analytics program from scratch, defining the security data strategy and an analytics mesh for metrics, security BI, and enriched detection.
- Built a Python self-service eDiscovery tool that let Legal run discovery requests across proprietary data indexes on their own, cutting turnaround 75%.
- Launched a gamified User Security Scorecard with Security Awareness, combining HR, ticketing, training, and log data to drive better security hygiene.

Associate Principal, Security Governance

OCC (Options Clearing Corporation) | Oct 2020 – Feb 2022

- Directed development of automated dashboards tracking application security defects and security risks with Tableau, Alteryx, and Python, saving 20+ hours a week; earned a Commitment to Excellence Award.
- Managed implementation of the X-Analytics cyber risk quantification platform, so leadership could weigh cyber risks in financial terms.

Senior Security Governance Analyst, Analytics

OCC (Options Clearing Corporation) | Sep 2019 – Oct 2020

- Automated monthly key risk indicator reporting with Tableau and Alteryx, enabling on-demand KRI reporting.

Security Governance Analyst, Analytics

OCC (Options Clearing Corporation) | Jul 2018 – Sep 2019

- Designed a Cyber Risk Metrics Index measuring enterprise risk across the NIST CSF and presented it to the Board of Directors; recognized with a Commitment to Excellence Award.
- Built OCC's Security Metrics Program from the ground up: a 100+ metric KRI and KPI catalog, managed in a custom Archer app, reporting on every Security team.
- Created a security risk lifecycle with assessment teams, carrying 360+ observations from identification to remediation and linking findings to formal risk acceptance.
- Represented OCC at NIST Privacy Framework development workshops in 2019, contributing to the framework's working groups.

Security Governance Consultant (contractor for OCC)

FDM Group | Aug 2017 – Jul 2018

- Co-authored and maintained the Reg SCI System Security Plan, aligned to the NIST CSF.
- Built a department-wide RSA Archer dashboard for tracking audit, compliance, and regulatory findings through remediation and validation.
- Analyzed network traffic logs to gauge the business impact of cutting internet access from critical systems.

Skills

Security Architecture: Risk Assessment, Security Architecture Review, SaaS Security

Cloud Security: AWS, Azure, CNAPP, GCP, Cloud Resource Tagging, CSPM

AI Security: AI Governance, LLM Security

Identity & Access: Least Privilege, SSO, IAM

Detection & Response: SIEM, Threat Detection, Incident Response, Threat-Informed Defense

Data Security: Encryption

Governance, Risk & Compliance: NIST CSF, Third-Party Risk Management, NIST Privacy Framework, Penetration Testing

Leadership: Mentoring, Security Strategy, Stakeholder Management

Security Operations: Vulnerability Management, eDiscovery, MITRE ATT&CK, Network Security, Physical Security, SOAR

Security Tools & Platforms: RSA Archer, Wiz, Panther, BitSight, CloudTrail, FluentBit, GuardDuty, Lambda, SecurityScorecard

Enterprise Platforms: Okta, Active Directory, Microsoft 365, Salesforce, SCIM

Data & Analytics: Security Metrics, Python, Alteryx, Tableau, Data Analytics, Cyber Risk Quantification

AI Tooling & Automation: AI Agents, Claude Code, Cursor, MCP, Process Automation

Program Management: Jira, Agile, Audit Management, Change Management, Jira Service Management, Reg SCI

Certifications

- AWS Certified Cloud Practitioner, Amazon Web Services, Jun 2023
- Certified Information Systems Security Professional (CISSP), ISC2, Sep 2021

Education

- Master of Science, Analytics | University of Chicago | 2022 (GPA 4.0)
- Bachelor of Business Administration, Statistics & Quantitative Modeling | Baruch College | 2017
- Associate of Science, Computer Science | Bergen Community College | 2014
